

What Is Claimed Is:

1. A coupler plug, in particular for a planar lambda probe, comprising a housing, i.e., a base element and a cover element, as well as

- electrical components, which may be placed inside the housing and fixed in place; and

- a balancing element for a probe, in particular, a planar broad-band lambda probe, which is to be mounted within the coupler plug or, via a further contact element, outside the coupler plug,

- a secondary locking element being provided as locating element for fixating at least one electrical flat plug-connector inserted in the housing,

wherein, in addition to the flat plug-connectors (7), flat contacts (8) are provided in the plug housing (6), which are able to be fixed in place simultaneously with the aid of the secondary locking element (1), the secondary locking element (1) having on a first level A a receiving device (3) for the flat plug-connectors (7) in the form of a locking plate (2), and on an additional level B a locating device in the form of a locking hook (4).

2. The coupler plug as recited in Claim 1, wherein the locking hook (4) is pointing away from the locking plate (2) at least in an approximately perpendicular manner.

3. The coupler plug as recited in Claim 1 or 2, wherein the locking plate (2) and the locking hook (4) form an integral component.
